Characterization of a 3 alpha-hydroxysteroid dehydrogenase/carbonyl
reductase from the gram-negative bacterium Comamonas testosteroni.*;
Eur. J. Biochem. 241:744-749(1996).
-I- FUNCTION: ALONG WITH THE 3 ALPHA-HYDROXYSTEROID DEHYDROGENASE AND
3-OXO-REDUCTASE ACTIVITIES TOWARDS A VARIETY OF CIS OR TRANS FUSED
A/B RING STEROIDS, IT ALSO REDUCES SEVERAL XENOBIOTIC CARBONYL
COMPOUNDS, INCLUDING A METYRAPONE-BASED CLASS OF INSECTICIDES, TO
THE RESPECTIVE ALCOHOL METABOLITES.
-I- CALPHA-ANDROSTANE-3,17-DIONE + NAD(P)(+) -

PT Claim 15; Page 37; 67pp; English.

CC This is the antigenic MART-1 peptide Milo-3. This antigenic compound
CC can be introduced into the cytoplasm of a cell by a new method where
CC can be introduced into the cytoplasm of a cell by a new method where
CC can be introduced with a fusion molecule comprising a delivery
CC molecule. The delivery molecule can either be a polycationic affinity
CC handle, LFN (the protective antigen binding domain of anthrax lethal
CC factor) or a toxin delivery molecule related to LFN. The antigenic
CC compound is linked to either of the delivery molecules by a covalent
CC bond. The B molety of a toxin enhances delivery of the antigenic compound
CC into a cell. The anthrax toxin system of the invention eliminates the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PT useful in pharmaceutical compons. to prevent or treat cancer, prevent or live transcription of the provided to the provided transcription of the provided to create transgenic animals, useful as biological models to study cancer candevaluate diagnostic animals, useful as biological models to study cancer candevaluate diagnostic animals, useful as biological models to study cancer candevaluate diagnostic animals, useful as biological models to study cancer candevaluate diagnostic animals, and used to detect native or denatured TCRs and/or alterations in expression levels of the treatment of create rations in expression levels of T cells carrying the above receptors, which can then be administered therapeutically to mammals. Anti-idiotype antibodies can be used to assess the level of a specific T cell carrying these receptors in a mammal being treated using these methods. Host cells and vectors carrying nucleic acid encoding pharmaceutical compositions to prevent or treat cancer in a mammal, e.g. Sequence 10 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

This sequence represents a specifically claimed example of a tumour rejection antigen (TRA) which was used with granulocyte macrophage colony-stimulating factor (GH-CSF) as adjuvant to generate an immune, specifically cytolytic T cell (CTL), response for treatment of cancers or where cell transformation has occurred, e.g. in melanoma or dysplastic new1. These tumour rejection antigens can also be used diagnostically (if they can induce CTL or antibodies specific for the antigens then this indicates presence of the antigen in the patient). GM-CSF provokes, or increases, immune response to the tumour rejection antigens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   need to generate fusion proteins with a toxin B molety, which alleviates problems associated with incorrect folding of lengthy fusion proteins. Small cationic fusion peptides substituted for LFN may reduce the possibility of steric interference with the biological activity of the translocated protein. The method is used for the introduction of antigens, e.g. MHC class I antigens or any other therapeutic protein, e.g. toxin molecules, apoptosis-inducing molecules or signalling proteins into the cells.
                                                                                                                     Human HLA-A*0201 immunogenic peptide 10-mer.

PT Increasing uptake and presentation of antigen(s) - by adding mannose presentation of antigen(s) - by adding mannose presentation (s) - by adding against viral infection(s) - by adding against viral infection(s) - by accines against viral infection(s) - by accines against viral infection(s) - by accines against viral infection(s) - contains against viral infection(s) - by accines against viral infection(s) - contains against viral infection(s) - by adding mannosylated contigens by antigen-presenting cells uptake of agonist mannosylated contigens by antigen-presenting cells uptake of agonist mannosylated contigens by antigen-presenting cells uptake of antagonist continues will increase the T cell response, whereas uptake of antagonist continues are presented in treatment of type I diabetes, rheumatoid architects, also to induce T-cell non-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PT Method of selecting T cell peptide epitope(s) - by measuring the PT stability of HLA class I-peptide complexes on intact B cells Example 3, Page 29; 109pp; English.

CC Peptides W39430-W39734 are used in a novel method for the selection of CC immunogenic T-cell peptide epitopes present in polypeptide antigens. The CC method involves the identification of peptide sequences capable of CC binding to an HLA (human leukocyte antigen) class I molecule and CC measuring the binding of this epitope peptide to the HLA class I peptide. CC complex) class I molecule is measured on intact human B cells carrying CC complex) class I molecule is measured on intact human B cells carrying the MHC molecule at their cell surfaces. The method can be used to select CC peptide epitopes for generating vaccines against a disease associated CC with the polypeptide, e.g. cancers or AIDS. The peptide epitopes are capacially T-cell peptide epitopes with strong anti-tumour and anti-viral CC immune responses. Peptide epitopes with strong anti-tumour and anti-viral CC presented by HLA-A*0201 positive melanoma cells and displays considerable CC presented by HLA-A*0201 in assays.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 99-105609/99.

PT New decamer peptides which bind to HLA molecules - useful to PT identify HLA-A2 positive cells and provoke T cells

PT identify HLA-A2 positive cells and provoke T cells

PS Claim 18; Page 6; 45pp; English.

CC The present invention describes peptides which bind to an HLA-A2

CC molecule and have val at the carboxy terminus, and either: (a) Als, Tyr

CC or Phe at the amino terminus, and Ala at position 2 (P1); or (b) Glu at

CC the amino terminus, and Ala at positions 2 and 3, with the

CC represents that Ala is not at both positions (P2). The present sequence

CC represents an HLA-A2 binding peptide. The peptides of the present

CC invention are used to identify HLA-A2 positive cells, provoke T cells,

CC and determine the presence of particular T cells including cytolytic

CC TL-stimulating peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            몆
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc immune response in a mammal against an antigen, and comprises:

(A) inducing an immune response by: (1) administering a virus containing

cc an uncleic acid molecule encoding the antigen or its precursor to generate

cc an immune response; and (1) administering a virus containing

cc an immune response; and (1) administering at least one booster dose

cc comprising a peptide including the antigen, in an adjuvant, in a combined

cc amount effective to enhance the initial immune response; or

(B) reducing an immune response as defined for (A) but using a

cc non-adjuvant with the peptide which includes the antigen, in an amount

cc effective to reduce the initial immune response. Method (A) is used to

ce hance the immune response against tumour cells expressing tumour

cc rejection antigens, and against pathogens in subjects having human

cc immune response in allergy, autoimmune disease, and allograft rejection.

cc Method (A) provides an immunisation method which, unlike prior art, is

cc sequence 10 AA;

The present sequence represents an exemplary tumour associated peptide antigen. The specification describes a MAGE-3 tumour associated gene. antigen (YU1721-25) that bind human leucocyte antigen (HLA) Class II molecules can be derived from the MAGE-3 protein. These peptides and autologous CD4+ cells that bind to a complex of MAGE-3 peptide and HLA Class II, are used to treat MAGE-3 related diseases, particularly cancers (e.g. melanoma, osteosarcoma, leukemia and various forms of carcinoma). The peptides are also used to produce specific antibodies. Detection of of the peptides, e.g. in binding assays, particularly with antibodies, is used for diagnosis of such

S Claim 12; Page 117; 184pp; English.

C Immunogenic peptide M9-2 is based on the melanoma antigen (MART-1 (see R84213). M9-2 may be modified to improve immunogenicity of see R84783-R84800) and used in medicaments for the treatment or prevention (by immunization) of melanoma. Antibodies against WAR and its immunogenic peptides may be used in the detection and cisolation of MART-1 from a sample, the detection of which is indicative of a disease state (melanoma or metastatic melanoma).

partic. lung, melanoma, ovarian, colon, brain or kidney tumours Example 3; Page 11; 125pp; English W07378-W07381 are MART-1 epitopes, M9-1, M9-2, M10-3 and M10-4 respectively, that are recognised by melanoma specific T lymphocyte receptors (TCRs). Melanoma-specific TCRs comprising an alpha and beta chain were made. Nucleic acids from either of these chains can be used as probes for the detection of expression of rearranged genes encoding tumour-associated antigens. The nucleic acids may also be used to create transgenic animals, useful as blucleic acids may also be used and evaluate diagnostic and therapeutic methods for the treatment of cancers, particularly melanomas. Antibodies (Abs) may be raised against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-JUL-1997 (first entry)

MART-1 epitope recognised by melanoma specific T cell receptor. T cell; receptor; lymphocyte; alpha; beta chain; V; variable; T cell; receptor; lymphocyte; asgment; probe; detection; joining; D; diversity; gene segment; probe; detection; recombination; melanoma; cancer; neoplasia; tumour; diagnosis; MART; Melanoma Antigen Recognised by T lymphocyte.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R84196; standard; Peptide; 9 AA.
R84196;
20-ART-1996 (first entry)
MART-1 melanoma antigen immunogenic peptide M9-2.
MART-1; M9-2; melanoma antigen recognised by T-cells; melanoma; metastatic melanoma; tumour-associated antigen;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-OCT-1996.

CC A non-dendritto peptide carrier (A) has been developed which is coupled Ct through a linker to a solid phase, forming a complex of (A)-solid phase. CC Where (A) comprises 10-50 amino acids capable of forming a secondary complex of the complex of the complex of complex of complex complex complex an immunogenic substance complex of an immunogenic substance compresent a peptide used in an example from the present invention. An compresent a peptide used in an example from the present invention. An compresent a peptide used in an example from the present invention of compresent a peptide used in an example from the present invention. An complex can be used as a scaffold for the production of complex points. Alternatively (A) is used as a scaffold-peptide for the incorporation into an immunostimularing complex (Iscom) resulting an complex peptides having fibronectin, laminin- or vitronectin-like complex can be used for the promotion of complex periods having fibronectin, laminin- or vitronectin-like complex periods having fibronectin, laminin- or vitronectin-like complex can be used for the promotion of cell-attachment to plastic surfaces, in particular to inhibit tumour growth and metastasis, and for promotion of wound healing. Also a derivatised (A) can be used for the selection of specifically-binding aptamers or as a diagnostic affections a surformume or careform a diagnostic of a derived from or indicative of pregnancy or of a disease, such as an interference of carried a disease, such as an an interference of carried and a season of the complex can be used for the complex and a season of the carried can be used to detect molecules and the carried carried carried to a disease, such as an an interference of carried carried carried to a disease, such as an an interference of carried carried carried carried to a disease, such as an interference of carried

Abs can also purify and enrich T cells carrying the above receptors, which can then be administered therapeutically to mammals. Anti-idiotype antibodies can be used to assess the level of a specific T cell carrying these receptors in a mammal being treated using these methods. Host cells and vectors carrying nucleic acid encoding a TCR (or individual alpha or beta chain fragment) are useful in pharmaceutical compositions to prevent or treat cancer in a mammal, e.g. lung, melanoma, ovarian, colon, brain or kidney tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Non-dendritic peptide carrier linked to a solid phase - useful diagnostic agent and as a scaffold for production of chemical derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  alpha

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunogenic T-cell peptide epitopes present in polypeptide antigens. Peptides W39430 and W39431 are derived from MART-1. The method involves the identification of peptide sequences capable of binding to an HLA (human leukocyte antigen) class I molecule and measuring the binding of this epitope peptide to the HLA class I peptide. The stability of binding of the peptide and MHC (major histocompatability complex) class I molecule is measured on intact human B cells carrying the MHC molecule at their cell surfaces. The method can be used to select peptide epitopes for generating vaccines against a disease associated with the polypeptide, e.g. cancers or AIDS. The peptide epitopes are especially T-cell peptide epitopes with strong anti-tumour and anti-viral immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-DEC-1996; EP-203670.

25-SEP-1998 (first entry)
Peptide 1 from Melan-A, Mart-1.
Mannose; antigen; antigen-presenting cell; mannosylated peptide; T cell; vaccine; treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    least a part of the following sequence, where the amino acid at position 2 or 8 is substituted: Lys-Thr-Trp-Gly-Glh-Tyr-Trp-Gln-Val. Vaccines comprising the peptide, an epitope of the peptide, nucleotide sequence encoding the peptide, or an antigen presenting cell preloaded with the peptide or antibody as above, are useful for cancer, particularly melanoma, treatment. The peptides can also be used to generate antigen reactive tumour infiltrating lymphocytes, which can also be used in vaccines. The peptides can be exploited to elicit native epitope-reactive cTL. Usage of the peptides with improved immunogenicity may contribute to the development of CTL-epitope based vaccines in viral disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     W54602 standard; peptide; 9 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cancer
